

Medical Report

SUMMARY

****Patient Details:****

- Patient Name: Mrs. Sumathi B
- Patient ID: 0100062370
- Joining Date (Reg.Date & Time): Not specified in the input file
- Test Report: Abdominal Ultrasound report from 23/04/2024
- Age/Sex: 66 years / Female
- Blood Group: O Positive

****Impression:****

The patient is a 66-year-old female with a past medical history of diabetes and hypertension. She presented with complaints of abdominal discomfort and bloating. The abdominal ultrasound was performed to evaluate the liver, gallbladder, kidneys, spleen, and pancreas. The findings revealed an enlarged liver with a mildly coarse echotexture, no focal lesions, and no intrahepatic biliary dilatation. The gallbladder was normal in size and shape, with no gallstones or pericholecystic fluid. The common bile duct was normal in caliber, and the pancreas showed normal size and echotexture with no focal lesions or ductal dilatation. The spleen was mildly enlarged, but no focal lesions were identified.
